

Leó Szilárd (1898-1964)

Leó Szilárd was born in 11. feb. 1898. He was very weak boy. His mother taught he at home when he was a child. He got his high school graduation in real grammar school, after he registered to technical university because he would liked to electrical engineer but he interested in atomic physics. He and Laue wrote his doctoral dissertation. He's other test was revealed in 1929; this test name was **Entropy decrease in a thermodynamic system due to an intelligent** and he was wrote here about the entropy and the information connections. This test the modern informatics starting point. He interested it for the elimination of sleep and the intelligence of dolphins. He never had house he always traveling He worked in the bath-tub what was his laboratory. But when the world war started he finished his study and went to the Austrian-Hungary army.

When the doctors diagnosed his blister cancer, he and his wife went to the library and they read about this illness. Leó sad the doctors use radiotherapy into his body(in New York). Some years after he got right. In 1964 he died of stroke. After the dissection the blister cancer was disappeared. His blooms were scattered in the air.
